Horizontal Separability

❖ Two sets in the plane are horizontally **separable** if ...

they lie resp. in the 2 (open) halfplanes defined by a vertical line

X-Sorting

❖ If we do an **x-sorting** before DAC ...

every pair of subhulls to be merged should be horizontally separable

❖ The **r**ightmost/**l**eftmost vertex of the L/R-subhull
lies to the left/right of the R/L-subhull
