大事化小，小事化了

❖ **Let S be a set of n points in the plane**

❖ **A point p of S is called an** extreme point

   if there exists a line L through p

      such that

         all **points of S lie on**

            the same **side of L**

❖ **Otherwise, p is called** non-extreme
